Project Title: Online Clinic Appointment & Billing System

1. Project Overview

The Online Clinic Appointment & Billing System is designed to streamline the operations of medical clinics and centers. The primary goal is to digitize appointment booking, reduce patient waiting times, manage doctor schedules efficiently, and automate basic billing procedures.

2. Key Objectives

Patient Convenience: Enable patients to search for doctors by specialty and book available time slots online.

Doctor Workflow: Provide doctors with an easy-to-use interface to manage daily patient lists and consultation records.

Administrative Efficiency: Allow clinic receptionists and admins to confirm bookings, update schedules, and process payments.

3. System User Roles & Features

- Patient Portal

View doctor profiles and consultation fees.

Book, view, or cancel appointments.

Track appointment status (Confirmed, Completed, Cancelled).

- Doctor Portal:

View daily booking schedule sorted by time slots.

Access basic patient details and medical history.

- Admin / Receptionist Portal:

Manage doctor availability and specialties.

Confirm or modify appointment requests.

Issue invoices and manage payment statuses.

- Feasibility & Data Tracking (Excel Integration)

The system requirements and initial data structure were modeled using Microsoft Excel (Clinic_Feasibility_Data.xlsx) to perform preliminary data analysis:

Appointment Tracking: Automated count of total bookings using =COUNTA().

Status Metrics: Filtering confirmed and active appointments using =COUNTIF().

Revenue Projections: Calculating overall revenue based on consultation fees and appointment counts.
